GREAT IDEAS IN TEACHING *MINI CONFERENCE*

HOSTED BY

ISU College of Education, ISU Center for Learning and Instructional Excellence,
and the ISU Graduate School

Making a Case for AI Literacy

Beverly Ray, PhD

Professor, Department of Teaching and Educational Studies
College of Education

This pre-recorded session will provide an overview of GenAI technology and terminology before explaining why AI Literacy is a critical citizenship skill for all. Understanding the terminology, along with understanding where we are with the technology, are of critical importance for educators. Knowledge, coupled with an awareness of the need for AI Literacy, helps educators and the students they teach hone a disposition to take action (i.e., participate in the civic process of deciding whether society will embrace AI, and, if so, to what extent it will allow AI to impact society).
